

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application.

Listing of Claims:

What is claimed is:

1. Cancelled.
2. Cancelled.
3. Cancelled.
4. Cancelled.
5. Cancelled.
6. Cancelled.

7. (Withdrawn). A heat induced rotating ornament as defined in claim 2 is characterized by: said ornament (8) is a roundabout lamp that comprises a bamboo-hat shaped top shade (82) fixed to the rotating bearer (1) and running horses (84) suspended under the top shade through suspension rods (83), and said top shade (82) has center symmetric slits in part of its central side surface, through which partial surface of the shade is formed into driving vanes (11) with air-vane rake face and with top shadetorch shaped.

8. (Withdrawn). A heat induced rotating ornament as defined in claim 2 is characterized by: said ornament (8) is an angel that comprises a skirt (85) having many units of driving vanes with air-vane rake face and the angel's body (85) fixed to the top of skirt and a top piece (12) as the angel's head.

9. (Withdrawn). A heat induced rotating ornament that comprises a rotating bearer (1) with an ornament (8) fixed to its external surface, a vertical rod (2) and base (3) that support the rotating bearer said vertical rod (2) is vertically fixed to the base (3) and a light source emitting heat (5) is set

on the base (3) under the rotating bearer (1); it is characterized by: the ornament fixed to the external surface of said rotating bearer (1) has partial side surface formed into evenly distributed vanes (11) with air-vane rake face and exit; said rotating bearer (1) has a short vertical downward taper rod (14) at its inner top; said vertical rod (2) has a taper recess (231) with upward opening said rotating bearer (1) with ornament (8) fixed to its external surface is put downward vertically with the taper of said short taper rod (14) fall into the taper recess (231) at the top of the vertical rod (2); said light source emitting heat (5) warms the air in proximity and forms a local low pressure at the light source (5), thus forming a rising air flow that acts on the driving vanes (11) of the ornament to produce lateral force, resulting in driving the rotating bearer (1) and the ornament fixed to its external surface rotate around the short taper rod (14), as the supporting point, in the taper recess (231) at the top of the vertical rod (2) and a sound gadget (6) set at the bottom of said base (3).

10. (Currently amended) A heat included rotating ornament comprises a rotating bearer (1) with an ornament (8) fixed to its external surface, a vertical rod (2) and base (3) that support said rotating bearer (1) with said vertical rod (2) vertically fixed to the base (3) and a light source emitting heat (5) is set on said base (3) under said rotating bearer (1); characterized by: said ornament fixed to the external surface of said rotating bearer (1) has partial side surface formed into evenly distributed vanes (11) with air-vane rake face and exit; said rotating bearer (1) has a short vertical downward taper rod (14) at its inner top; said vertical rod (2) has a taper recess (231) with upward opening said rotating bearer (1) with ornament (8) fixed to its external surface is disposed ~~put~~ downward vertically with the taper of said short taper (14) ~~fall~~ falling into the taper recess (231) at the top of said vertical rod (2); said light source emitting heat (5) warms the air in proximity and

forms a local low pressure at the light source (5), thus forming a rising air flow that acts on the driving vanes (11) of the ornament to produce lateral force, resulting in driving the rotating bearer (1) and the ornament fixed to its external surface rotate around said ~~the~~ short taper rod (14), as the supporting point, in the taper recess (231) at the top of the vertical rod (2) and with a sound gadget (6) disposed at the bottom of said base (3).
